WEB DATA MANAGEMENT 2208 – CSE - 5335 - 002
Instructor : Dr. Elizabeth D Diaz
Fall 2020

PHASE 4 DESCRIPTION

Inside the folder – All html and php files, one .css file(<mark>cataloguesystem.css</mark>), <mark>images</mark> folder, report, user and DB tables.

The following pages have been done dynamically (using PHP Database Connection)

Login
- A table has been created by the name **'users'** which has values like **name, email, password and role**. So based on this few values have been inserted into the table (which I've attached separately in a doc.) So based on the given credentials it gets navigated to that specific page of role (Eg: Student Homepage/Staff Homepage)
- If incorrect credentials are given, required validations have been provided.

Register
- In this when the user tries to register then those details will automatically get added to the DB and an email confirmation will be sent to that email. So in-order to verify this functionality kindly provide a valid email to receive the email confirmation. Required validations have been provided.

Contact Us
- A contact form has been provided where the user can send their queries through this form. A default mail has been set to 'edurandomacc@gmail.com' so that all queries will be sent to that mail.

Course Enrollment
- Student will be able to enroll for the courses after clicking on the enroll button. And this changes will be reflected in another page "Enrolled courses". The student can check the list.

List of Courses
- This page is visible to students and the student will be able to see the courses-list which will be retrieved from DB. A table **'courses_list'** in which the course related info has been provided.

Provide Feedback
- Student can provide their feedback in this section.

Planned Courses
- Planned courses is only available for staff. So in this the page is designed in such a way that for different staff members the planned courses list will be different. Staff can add/delete the courses in this.

Upcoming Courses

- Similar to Planned courses it's only available for staff. So in this the page is designed in such a way that for different staff members the upcoming courses list will be different. Staff can add/delete the courses in this.

View Feedback
- Feedback provided by student will reflect here for the staff.

Admin-Users Page
- All the list of users will be retrieved from DB and will be displayed in this page.

CREDENTIALS

- I've provided the screenshots directly from the database in another file called readme_usercredentials.pdf For better results, please try with –

STUDENT
Email : abc@gmail.com
Password : check123

STAFF
Email : car@gmail.com
Password : check789

ADMIN
Email : lockwood@gmail.com
Password : admin123
